Audio Video Solutions

For Conference Rooms:

In today's fast-paced commercial environment, easy access to key information and seamless communication are fundamental to enabling management and teams to operate more effectively.

The ever-increasing demands on businesses to increase their output, whilst keeping time and travel costs down, is driving more organisations to invest in an effective boardroom AV solution.

Conference rooms and boardrooms have long been a keyspace within a business environment, where people can meet, share, collaborate, update, brainstorm and make decisions, face-to-face, in a comfortable and professional environment.

Our experts ensure that you have the right conference room & boardroom AV solution so you can have a high-quality conference room audio, video conferencing, lighting, thermostats and more. With us, you can maximize the power of your meetings. The right boardroom and conference room audio video design and installation with us will guarantee that you and your team aren't spending too much time trying to make technology work or getting a client's time wasted.

For Huddle Rooms:

Huddle Room solution is designed to turn any space into a meeting space by delivering high-quality audio in a powerful and cost-effective package that is simple to operate and manage.

We have multiple solutions that enable cost-effective huddle rooms. Integrated control, audio de-embedding, and switching make the design simple and repeatable. Advanced Automatic Display Control features make it simple for anyone to use these rooms.

With switching, scaling, extension for inputs and outputs, and audio de-embedding in a small box, you can be certain Techspire technology supports collaboration!

Auditorium Solutions

Conducting live events in auditoriums is usually a complex and taxing task – but the latest Networked (AV) Audio Visual technologies can make them more impressive, and simpler to manage.

Our professional team are experts in the design and integration of the sophisticated audiovisual technologies that need to seamlessly integrate to bring image, sound and lighting together into a dynamic auditorium presentation.

Digital Cafeteria with Digital Signage Solutions

The digital cafeteria is the new solution for the corporates to give their employees the best experience.

We understand the dynamic use of these architectural spaces. With dynamic designs and automated intelligent technologies, We provide strategically designed and visually stunning digital cafeterias which are integrated with displays, projectors and sound systems.

Digital Signage Displays Commonly available in 32"- 90" sizes, can be easily configured to accommodate the needs of your modern corporate cafeteria design. For larger displays, they can be combined to form a video wall or used singularly for streaming, video conferencing, presentations, and digital signage.

For ideal sound clarity during presentations, AllWave uses a dedicated audio system separate from the building's overhead paging system. Such systems provide zoned distribution and can be programmed to prevent interruptions from the paging system that is used for information announcements.

Digital Signage Menu Boards offer greater capabilities than traditional menu signage, including images of menu choices, interactive features such as order entry and item modification, nutritional information, and promotion of healthy dining options. They allow menu changes and pricing revisions that can be automated or easily implemented manually.

Sophisticated cafeteria AV control systems in the digital cafeteria to simplify our ability to interact with the technology. These systems operate as the main hub of an AV system, integrating all the components together to make it as easy as a press of a button or the click of an icon for end-users to start multiple technologies at once.

Corporate Cafeteria projectors should be of high-resolution so that they can be used with a wide variety of content sources, such as DVDs and other streaming media from a content server. Projectors can be used in the main cafeteria space to display content for both large group presentations or small interactive sessions.

Key Features and Benefits

- Big screens, sharp displays with multi-windowing capacity allow High Definition display from PC or Cable TV inputs.
- HD cameras cover the Presenter & the participants seated in the cafeteria for an effective Town Hall session.
- Added displays for people seated across the cafeteria.
- Interactive Lectern for Presenters to conduct presentations smoothly.
- Audio systems that ensure speech and program are evenly audible in all parts of the cafeteria.
- The open touch-panel control interface allows one-touch control of AV equipment, dialling, lighting.
- Preset lighting system to suit a range of functions of the cafeteria.
- Record and stream audio, video and PC presentations over IP networks.
- Connectivity Receptacles for PC and video.

Guest Lounges

Transforming your existing Lounge space or designing it from scratch, we have it covered.

Audio-visual solutions have increased in demand at an exponential rate, and they are now more applicable and achievable than ever due to more recent advancements in technology.

Speaker designs have evolved to suit your environment, from the ceiling, mounted speakers to speakers discreetly hidden in the walls! Gone are the days of prominent, black, bulky speakers on display consuming valuable living space. Equipment can now be discrete and enclosed for low visual impact and high security.

Meeting Rooms

No matter what size your conference room, you demand exceptional quality—video and audio that makes it feel like you're in the same room. Content sharing that makes collaboration possible no matter where your team is located. Technology that creates powerful connections—and just works.

Audio-Video Solutions brings meetings to life – quite literally. From single meeting rooms to multiple offices, these are the spaces where integrated audio-visual technologies enable organisations to unite and collaborate with colleagues and partners based on-site or on the other side of the world.

Discreet, stylish, intelligent and with every component harmonised and integrated to automate and control everything from sound, vision and environmental settings, your meeting room AV is one of the most rewarding investments your business will ever make.
